

OPERATION POLICY

uRecycle collects, sorts and recycles batteries and dry batteries. By developing new recycling technologies and knowledge of materials together with our operators, we ensure a profitable and secure environment for all parties involved.

Our goal is to provide sustained and confidential co-operation with our customers and stakeholders by providing consistent services that meet all requirements.

The right level of quality is produced only by the commitment of management and staff to our operations.

We commit to developing our working environment in co-operation with our personnel, and this way create a safe and healthy working environment.

Consciousness is maintained through regular training and dialogue.

The positive environmental impact of our operations is the more environmentally-friendly recycling of batteries and accumulators, using the best possible technologies.

In our operations, we take into account the environment, and thus we create a basis for preventative environmental work, where technically feasible and economically viable.

By following our operating system, we ensure continuous improvement.

Laws and regulations set out by the authorities are always our minimum requirements.
